

Ethical and Data-Protection Note

Source: Appendix F of the final report

Data handling

The package uses public or lawfully accessible secondary sources and does not collect personal data. Restricted microdata, copyrighted PDFs, and external maps or datasets are not redistributed.

Protection boundaries

The report does not publish individual household information, sensitive facilities, unverified evacuation routes, or rankings of communities. Restricted datasets are described only at the level permitted by their public documentation.

Evidence language

Where current evidence is missing, the report states that a capability is unverified or represents an evidence gap. It does not claim that the service is absent. Future field validation should use informed participation, data minimization, secure handling, accessibility, and harm prevention.
